

## Clinical Trial Management Offerings

BioPharm Systems' clinical trial management practice possesses deep expertise in Oracle's Siebel Clinical, the leading clinical trial management system (CTMS) on the market. Siebel Clinical serves as a central repository of clinical trial management information and provides greater visibility into real-time site and study statuses. With this critical data at your fingertips, companies like yours are empowered to make more informed decisions during clinical trials.

To make Siebel Clinical even more useful and attainable, we developed ASCEND, a CTMS accelerator. ASCEND is a pre-configured and enhanced version of Siebel Clinical that is affordable for small and medium-sized life sciences organizations. BioPharm Systems' CTMS accelerator minimizes costs and timeframes, and includes robust capabilities that facilitate a more effective and efficient clinical trial process.

### ASCEND Quick Facts:

- **Documentation:** It comes with a complete set of systems development life cycle (SDLC) documentation, from requirements through testing.
- **Validation:** It is "validation-ready," so all you need to do is prove that it functions correctly in your environment. To assist with that task, we provide an executable user acceptance test script.

- **Training:** Our package includes complete "train-the-trainer" end-user training, designed to prepare your core users to train the rest of your users, and Siebel administration training, designed to empower you to manage the administrative tasks that can be done through the user interface.
- **Improvements:** It comes with ongoing support and continued improvements based on feedback from our user base – other companies just like yours.

“*Selecting ASCEND as our solution answered our challenges and much more.*”
