

CTMS Implementation Options

BioPharm Systems' clinical trial management practice possesses deep expertise in Oracle's Siebel Clinical, the leading clinical trial management system (CTMS) on the market. Siebel Clinical serves as a central repository of clinical trial management information and provides greater visibility into real-time site and study statuses. With this critical data at your fingertips, companies like yours are empowered to make more informed decisions during clinical trials.

Siebel Clinical was once only attainable to large-scale organizations with extensive in-house IT resources and infrastructures. However, BioPharm Systems developed several implementation options for Siebel Clinical that are designed to meet the needs of organizations of just about any size, including yours.

Implementation options include:

- On-Premises: All hardware and software is owned, housed, and maintained by your organization.
- Dedicated Hosting: All hardware and software is owned by your organization, but housed and maintained by BioPharm Systems and its state-of-the-art data center.
- Shared Hosting: Software is owned by your organization, but the hardware is owned,

housed, and maintained by BioPharm Systems and its state-of-the-art data center.

- Subscription-Based: Your organization does not own, house, or maintain any software and hardware, but rather leases the use of both for an affordable monthly subscription.
 - This subscription-based offering, known as ASCEND On-Demand, is a pre-configured and enhanced version of Siebel Clinical that uses a software-as-a-service (SaaS) platform. Its pricing model, which consists of a small one-time setup fee and low per-user monthly fee, makes it attractive to life sciences organizations with as few as five users.

Let the experts at BioPharm Systems help you determine which implementation option is right for your organization.
